Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) An inf	terface method for viewing and selecting among
a variety of currently available	commercial broadcasts comprising the steps
of:	, 0
• • • •	

determining an association of each said commercial broadcast with a program category of a plurality of program categories; and within a single viewing screen, simultaneously presenting video broadcast information directly from full-scale video information for each of said commercial broadcasts, including:

(1) generating reduced-scale presentations of each of said commercial broadcasts, including locally originating said reduced-scale presentations being based on said video broadcast from said full-scale video information for exclusive display on said viewing screen; and

(2) dynamically clustering said reduced-scale presentations in correspondence with said program categories, including displaying a plurality of clusters of said reduced-scale presentations in which each said cluster includes said reduced-scale presentations for all of said commercial broadcasts associated with said program category that corresponds to said cluster;

thereby utilizing said viewing screen to display each said cluster as a totality of said commercial broadcasts that are currently available within said program category that corresponds to said cluster.

- 2. (original) The interface method of claim 1 wherein said step of dynamically
- clustering includes varying a number of sald reduced-scale presentations in 2
- said clusters as a function of changes in said commercial broadcasts.

Attomey Docket No. 10006285-1

Rev. 0 5/26/04 (Our Ref. HP-315)

- 3. (currently amended) The interface method of claim 2 wherein said 1
- commercial broadcasts are television broadcasts carried via television 2
- channels, said step of determining associations said association for each said 3
- commercial broadcast including monitoring reception of said television 4
- channels at a location of said viewing screen to detect tag information that is
- 6 specific to current programs available via said television channels.
- 4. (original) The interface method of claim 1 further comprising a step of 1
- 2 enabling a user to initiate a genre-dividing mode in which at least one said
- 3 cluster is split into separate sub-clusters on a basis of genres.
- 5. (original) The interface method of claim 4 wherein said step of enabling
- said user includes providing cluster splitting into said sub-clusters on the basis 2
- 3 of different sports and on the basis of different movie genres.
- 6. (original) The interface method of claim 1 wherein said step of presenting 1
- said video broadcast information includes overlapping said reduced-scale 2
- presentations within at least one said cluster, said interface method further 3
- 4 comprising steps of:
- 5 (1) enabling a user to select which said reduced-scale
- presentation in said at least one cluster has the appearance of being the 6
- 7 foremost reduced-scale presentation; and
- 8 (2) enabling said user to select any said reduced-scale
- presentation in any said cluster for viewing in a full-screen mode of operation. 9
- 7. (original) The interface method of claim 6 further comprising steps of: 1
- maintaining historical information regarding user selections; and 2
- arranging said clusters and arranging said reduced-scale 3
- presentations within said clusters as a function of said historical information.

Application No. 09/882,314

-5-

- 8. (original) The interface method of claim 6 further comprising a step of 1
- cycling an arrangement of said overlapping reduced-scale presentations in 2
- said at least one cluster such that each said overlapping reduced-scale 3
- presentation is periodically said foremost reduced-scale presentation.
- 9. (currently amended) The interface method of claim 1 wherein said step of 1
- generating said reduced-scale presentations includes displaying incoming 2
- television programs in real time, such that said reduced-scale presentations in 3
- each said cluster are miniaturized displays which are in constant 4
- 5 synchronization with said television programs are dynamic.
- 10. (original) The interface method of claim 9 wherein said step of generating 1
- 2 includes filtering television commercials, such that said reduced-scale
- 3 presentations are static during said television commercials.

Application No. 09/882,314

PHONE NO. : 650 969 6216

11. (currently amended) An interface method for viewing and selecting 1 among a variety of television channels comprlsing the steps of: 2 receiving program transmissions at a particular site via said 3 4 television channels; 5 recurringly identifying a program category for each said television channel on a basis of a currently available program being broadcast 6 7 via variety of said television channel, said identifying occurring at said 8 particular site; generating originating reduced-scale presentations of each said 9 currently available program from video signals of said currently available 10 program, said reduced-scale presentations being a manipulation of said video 11 signals that is original to said particular site; 12 13 displaying each said presentation on a single screen at said particular site, including grouping said presentations on a basis of said 14 program categories, thereby displaying a number of groups that corresponds 15 16 to the number of program categories, with each well populated group having 17 overlapping presentations; 18 enabling a viewer to remotely control browsing through said groups and browsing among said presentations within a specific group; and 19 enabling said viewer to select a particular said presentation for 20 full-screen viewing of the program from which said particular presentation was 21

1 12. (original) The interface method of claim 11 further comprising a step of

2 arranging said groups and said presentations within said groups as a function

originated, wherein each selection for said full-screen viewing is exclusive to

3 of historical information that is representative of prior selections by said

4 viewer.

22 23

1 13. (original) The interface method of claim 11 further comprising a step of

2 enabling said viewer to selectively increase or decrease said number of

3 groups by increasing or decreasing said number of program categories.

1 14. (original) The interface method of claim 13 wherein said step of enabling

2 increases includes providing cluster splitting according to genres and includes

3 merging previously split clusters.

said single screen generated.

15. (currently amended) A system for viewing and selecting among a variety

of currently available commercial broadcasts comprising: 2 a detector configured to identify each said commercial broadcast 3 with a program category of a plurality of program categories; 4 a video processor connected to receive said commercial 5 broadcasts and configured to output reduced-scale presentations of said 6 commercial broadcasts from said variety of commercial broadcasts, said 7 reduced-scale presentations being continuously updated video broadcast 8 information; and 9 a viewing screen cooperative with said detector and said video 10 processor to display said reduced-scale presentations in clusters that have a 11 one-to-one correspondence with said program categories, with all of said 12 commercial broadcasts that are identified with one of said program categories 13 being simultaneously displayed, said video processor and said viewing screen 14 being operatively associated such that said reduced-scale presentations are 15 available exclusively for said viewing screen. 16

- 17. (currently amended) The system of claim 15 wherein said video 1
- processor is configured to continuously update said video broadcast 2
- information relevant to each said reduced-scale presentation, such that said 3
- reduced-scale presentations are ongoing displays of said commercial 4
- broadcasts in real time. 5
- 18. (original) The system of claim 17 further comprising a commercial filter 1
- enabled to detect commercials and to inhibit said continuous updating during 2
- commercial times. 3

-8-

- 19. (original) The system of claim 15 further comprising memory connected 1
- to store historical information indicative of selections of said commercial 2
- broadcasts by a viewer, said memory being accessed by said video processor 3
- to control arrangement of said clusters and said reduced-scale presentations 4
- within said clusters as a function of said historical Information. 5
- 20. (new) The interface method of claim 11 wherein said originating is a 1
- miniaturization of each said currently available program, such that said 2
- displaying enables continuous viewing of said program transmissions but at a 3
- miniaturized level.

and

foremost reduced-scale presentation;

Application No. 09/882,314

21. (new) An Interface method for viewing and selecting among a variety of

determining an association of each said commercial broadcast

within a single viewing screen, simultaneously presenting video

currently available commercial broadcasts comprising the steps of:

with a program category of a plurality of program categories; and

6	broadcast information directly from each of said commercial broadcasts,
7	including:
8	(1) generating reduced-scale presentations of each of said
9	commercial broadcasts, said reduced-scale presentations being based on
10	said video broadcast information; and
11	(2) dynamically clustering sald reduced-scale presentations in
12	correspondence with said program categories, including displaying a plurality
13	of clusters of said reduced-scale presentations in which each said cluster
14	includes said reduced-scale presentations for all of said commercial
15	broadcasts associated with said program category that corresponds to said
16	cluster;
17	thereby utilizing said viewing screen to display each said cluster
18	as a totality of said commercial broadcasts that are currently available within
19	said program category that corresponds to said cluster:
20	wherein said step of presenting said video broadcast information
21	includes overlapping said reduced-scale presentations within at least one said
22	cluster, said interface method further comprising steps of:
23	(a) enabling a user to select which said reduced-scale
24	presentation in said at least one cluster has the appearance of being the

(b) enabling said user to select any said reduced-scale

(c) cycling an arrangement of said overlapping reduced-scale

presentation in any said cluster for viewing in a full-screen mode of operation;

presentations in said at least one cluster such that each said overlapping

reduced-scale presentation is periodically said foremost reduced-scale

presentation.

being simultaneously displayed.

PHONE NO. : 650 969 6216

1	22. (new) A system for viewing and selecting among a variety of currently
2	available commercial broadcasts comprising:
3	a detector configured to identify each said commercial broadcast
4	with a program category;
5	a video processor connected to receive said commercial
6	broadcasts and configured to output reduced-scale presentations of said
7	commercial broadcasts, said reduced-scale presentations being video
8	broadcast information, said video processor being configured to continuously
9	update said video broadcast information relevant to each said reduced-scale
10	presentation;
11	a commercial filter enabled to detect commercials and to inhibit
12	said continuous updating during commercial times; and
13	a viewing screen cooperative with said detector and said video
14	processor to display said reduced-scale presentations in clusters that have a
15	one-to-one correspondence with said program categories, with all of said
16	commercial broadcasts that are identified with one of said program categories
